

## SWH Racking System Data Sheet Version 12.10.v2

## SWH Solar Mount Flashed L-feet Kit Part No. MR-SW-FL-1210H, MR-SW-FL1210HB

- Raised L-feet material: 6005-T5 extruded aluminum alloy
- · Flashing material: Steel powder coated silver/black
- Bolt & nut material: 304 stainless steel
- Raised L-feet weight: .372 lbs (not including hardware)
- Flashing weight: 1.04 lbs (not including hardware)
- Attach 5/16" x 7 1/2" lag bolt through raised L-feet and flashing to the rafter below roof. Use stud finder tool and drill a pilot hole before anchoring down with lag bolt.

CONFORMS TO UL 2703
ETL CLASSIFIED

Intertek

Lag pull-out (withdrawal)	capacities (lbs) in typical	roof lumber (ASD)
Lag pair out (With larawar,	capacities (183) in typical	1001 Millioci (100)

	5/16"lag screw* specifications	
	Specific gravity	per inch thread depth
Douglas Fir, Larch	0.50	266
Douglas Fir, South	.46	235
Engelmann Spruce, Lodgepole Pine <sup>1</sup>	.46	235
Hem, Fir, Redwood (close grain)	.43	212
Hem, Fir (North)	.46	235
Southern Pine	.55	307
Spruce, Pine, Fir	.42	205
Spruce, Pine, Fir <sup>2</sup>	.50	266   Thread
<sup>1</sup> MSR 1650 f & higher		depth
<sup>2</sup> E of 2 million psi and higher grades o	of MSR and MEL	<b>↓</b>

## Notes

- (1) Thread must be embedded in the side grain of a rafter or other structural member integral with building structure.
- (2) Lag bolts must be located in the middle third of the structural member.
- (3) These values are not valid for wet service.
- (4) This table does not include shear capacities. If necessary, contact a local engineer to specify lag bolt size with regard to shear forces.
- (5) Install lag bolts with head and washer flush to surface (no gap). Do not over-torque.
- (6) Withdrawal design values for lag screw connections shall be multiplied by applicable adjustment factors if necessary. See Table 10.3.1 in the American Wood Council NDS for Wood Construction

\*Use flat washers with lag screws. t
